

# SAP Digital Transformation

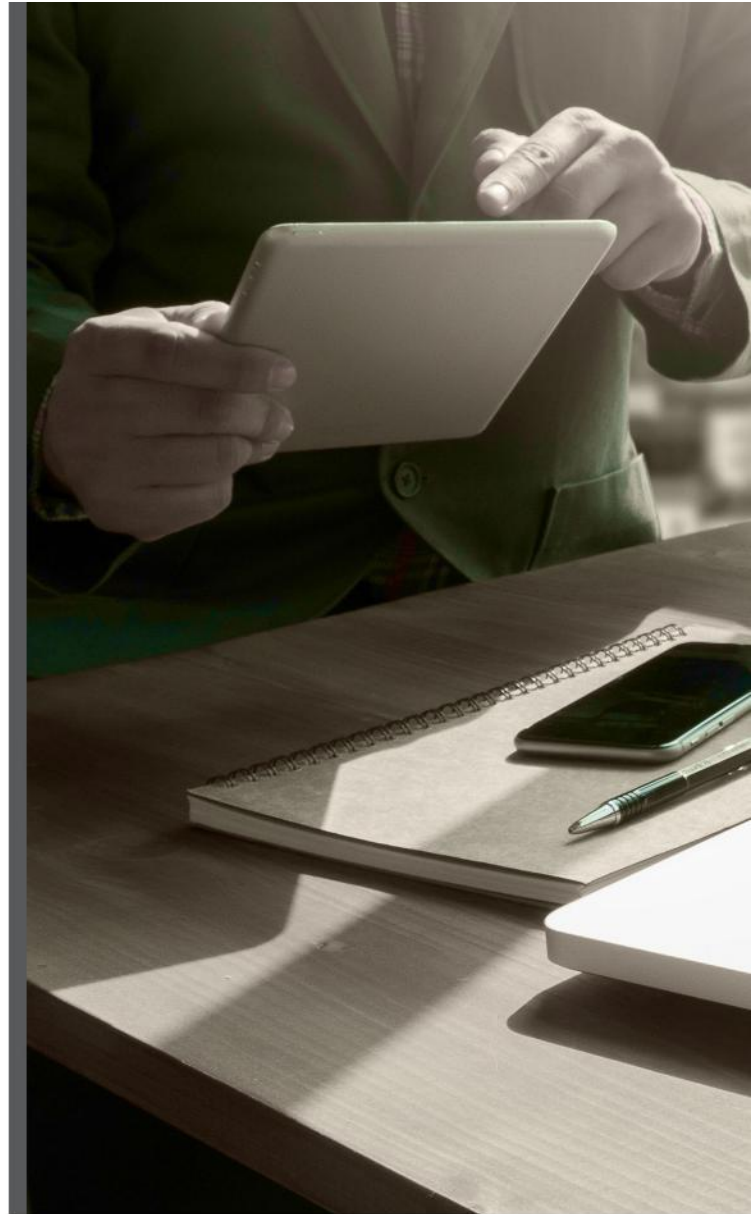

Transforming your company  
to succeed in the digital  
market

## Digital Transformation Is Driving The Need for Information Excellence

The digital economy is driving the need for information to be ubiquitously connected, always available, and more easily monetized. When we look at what is happening in the market, We see that although data volumes have been growing exponentially the addition of tens of billions of IoT devices is going to significantly accelerate that growth.

## What can information excellence do for your organization?

Although the business outcomes companies are hoping to achieve with digital transformation are nothing new.

The importance of information in successfully realizing these outcomes is growing.

**Simplify the IT Landscape**  
 30% reduction in IT operations cost<sup>1</sup>

**Deliver Real-Time Insight**  
 \$52M higher annual revenue<sup>2</sup>

**Automate Business Processes**  
 130% increase in order deliveries with no additional staff members<sup>3</sup>

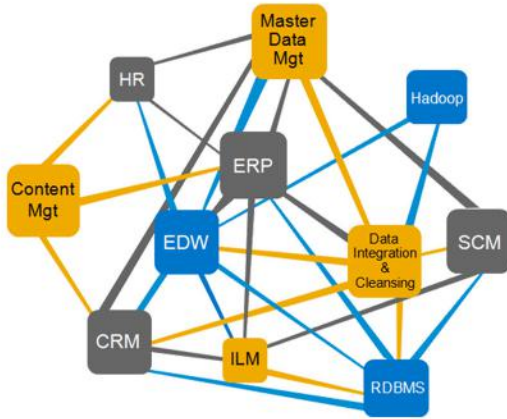

**Reduce Business Risk**  
 4% of revenue per violation of EU GDPR<sup>4</sup>

## But IT complexity is a barrier to using information optimally

Unfortunately, many organizations still have siloed applications, data stores, and information management capabilities, Which is why the vast majority of people say they spend too much time trying to find the information they need.

Further compounding the complexity problem are organizational silos and the lack of a holistic information strategy, Which is why Gartner predicts half of all CDOs will fail.

**77%** of organizations lack a comprehensive information platform<sup>1</sup>

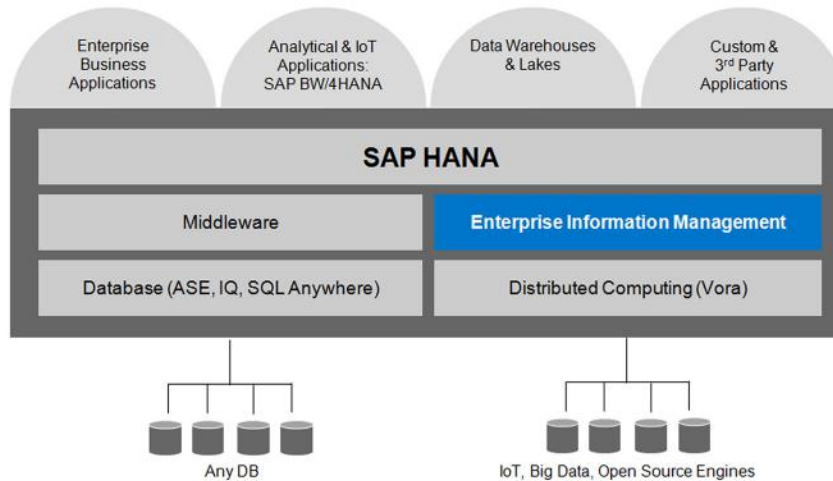

**85%** of people say they spend extensive amounts of time trying to find their content<sup>2</sup>

**50%** of chief data officers will be unsuccessful through 2019<sup>3</sup>

## How Can SAP Help You Achieve Information Excellence?

with SAP Enterprise Information Management solutions

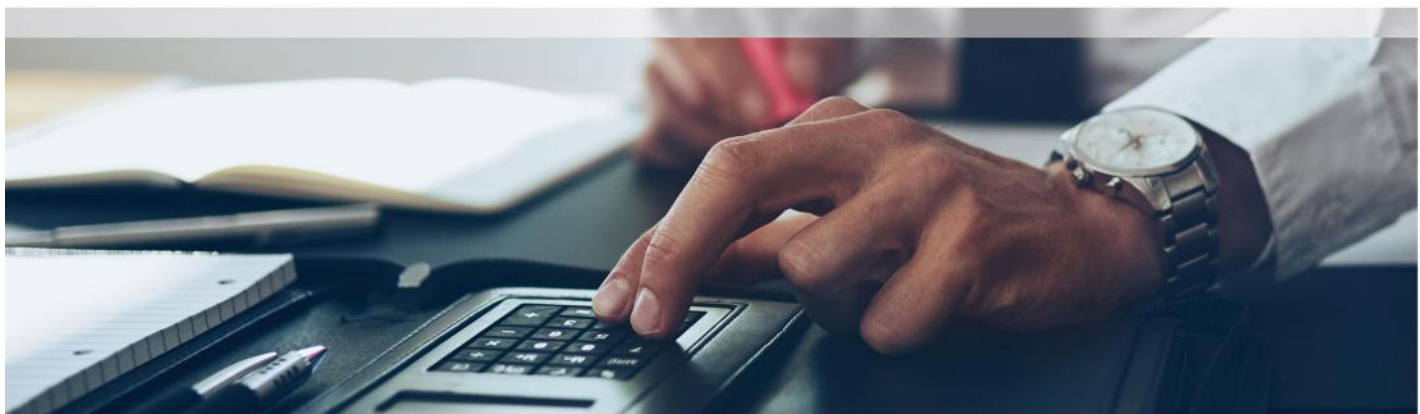

### SAP reduces IT complexity with a unified data platform

“ENGIE is enabling its digital transformation initiatives with new technologies, with Big Data, IoT and mobility as priorities.

This will require a completely new data architecture including data storage.”

**G rard Guinamand,** Deputy CIO, ENGIE

## The Value Proposition

Cognitus Consulting can help you reimagine your strategic business model and redesign your business processes, leveraging **SAP S/4HANA** and **SAP Leonardo**. We will also support and complement your digital transformation with integrated products based on Hyperledger like **Tradefn**. We will also ensure your transformation is IFRS compliant using the **HamiltonEngine**.
